

Heritage Lighting

Trusted solutions since 1976

Heritage Lighting

Heritage lighting covers a wide range of design eras, from traditional Victorian lanterns to more contemporary mid-century luminaires. Choosing an authentically designed product that is sympathetic to the aesthetics of the location is therefore key.

Today’s period-style solutions boast classic aesthetics to protect the look and feel of heritage areas, while also delivering the performance and energy efficiency benefits required of modern lighting applications.

Authentic styling and attention to detail is incredibly important to preserve charm and character, and care must be paid to not just the style of lighting, but the individual components such as the lanterns, columns and mountings.

This brochure serves as a guide to selecting the right heritage lighting solution for your next scheme.

Often imitated, never bettered

As a trusted British brand for over 45 years, DW Windsor has established itself as a leading provider of heritage lighting solutions. With a rich heritage of skills and expertise, we are powered by people committed to delivering outstanding products and services.

Period styling is at the heart of our heritage lighting range, spanning from traditional Victorian style lanterns with authentic detailing and ornate embellishments, to contemporary luminaires from more recent times.

Throughout our range, you will discover classic styling and superior quality, all combined with the latest technology to deliver unparalleled efficiency and performance.

Bespoke lanterns (1980)
Covent Garden Market, London

Craftsmanship meets innovation

Quality and craftsmanship of the highest calibre are apparent throughout our heritage range. Our lanterns are handmade using high quality materials and a blend of traditional and modern construction techniques to ensure product robustness and longevity.

We continually strive for innovation in the design and performance characteristics of our products. Accurate measurement and reliable testing are the foundation of our product development activities.

DW Windsor has one of the most comprehensive lighting laboratories in the UK and are continually investing in the latest equipment to ensure customers can be confident in the quality and performance of our products.

Uncompromising attention to detail

Authenticity and our commitment to accuracy are the foundations on which our heritage lighting range is built. We take great care in ensuring our luminaires retain the aesthetics and proportions of the original period lanterns, without compromising on quality.

Our ability to deliver timeless designs with authentic styling and a meticulous attention to detail has helped DW Windsor establish itself as a leading provider of heritage lighting solutions.

From the choice of material to individual design features, every detail has been carefully considered to ensure our lanterns deliver on performance while preserving the charm and elegance of the lanterns on which they are based.

Classic design, modern technology

Advances in LED technology have meant that in addition to higher quality light, customers can also reduce costs and make energy savings, as well as take advantage of new opportunities in both luminaire design and functionality.

The convergence of lighting and intelligent control systems has also opened up new possibilities in terms of light management, helping to deliver the right light at the right time. This results in more sustainable solutions which conserve energy while minimising their impact on the natural world.

We offer a broad selection of heritage luminaires that blend traditional design with advanced features, providing specifiers with the tools needed to create effective night-time illumination.

Heritage luminaires

Our Heritage lighting range offers traditional styling and craftsmanship, with superior light quality and energy efficiency from the latest LED technology. Timeless, authentic designs and award-winning optical performance make our heritage lanterns ideal for a wide range of applications from residential to public realm.

Downing Street

Case study

To support the City of Westminster's long-term carbon reduction strategy, the original lamped DW Windsor lanterns located outside 10 Downing Street required upgrading to LED.

To reduce energy usage, while improving the quality and uniformity of the street lighting in the area, the City of Westminster approached DW Windsor for a solution. The scheme required high quality, heritage luminaires suited to the surrounding architecture that also provided access for maintenance and compatibility with security and media cameras, while also ensuring that the lighting was acceptable for the residents.

Windsor Street lanterns were specified with 3000K Performance LED light engines, maintaining lighting levels while halving energy usage. In addition, CMS integration allowed for remote monitoring and management, offering further potential savings.

"When the Downing Street lighting became due for an upgrade, it was an opportunity to significantly reduce our lifecycle costs and minimise maintenance, which was achieved by converting to LED."

— Asset Manager, City of Westminster

Light engines & control options

Night-time illumination is a necessity of modern life in many urban settings. The right exterior lighting can make an environment feel safer and more welcoming, enhance the impact of architecture and even positively influence behaviour. At DW Windsor, we offer a range of LED light engines and control options to ensure the right light is used, at the right time, in the right place.

LED light engines

Tunable white lighting

At DW Windsor, we aim to give designers the tools they need to tackle the ongoing challenges of balancing the safety of pedestrians and road users with light pollution and the impact on biodiversity.

Our Heritage lighting range can now be specified with Tunable White technology, providing a flexible, dynamic solution for night-time illumination. By adjusting the luminaire's colour temperature and brightness throughout the night, the innovative system can improve visual comfort, offering a sense of security while also minimising the impact on flora and fauna.

The system is easily and securely configured via Bluetooth using a smart device, either by directly setting the desired CCT and brightness or creating time-based scenes to dynamically change during the hours of darkness.

Key Features

- Dynamic system provides a sense of security whilst improving visual comfort
- Two transition options 3000K - 2200K and 4000K - 2700K
- Cooler colour temperatures provide better visibility during peak activity hours
- Warmer colour temperatures and low intensities minimise the impact on wildlife

Windsor Street lantern with CMS
University of Glasgow, Lanarkshire

Lighting control solutions

Lighting controls can greatly enhance any environment in which they are installed, offering many benefits, from increased flexibility to helping lower energy usage. We offer a range of solutions from simple to advanced, designed for a variety of applications.

Stand-alone Controls

Direct control in its simplest form, stand-alone systems are reliable and straightforward – ideal for basic energy saving.

- Pre-set dimming
- Daylight sensors
- Motion detectors

Local Network Solutions

A cost-effective system that can be adapted on-site without specialised equipment – enables further energy saving optimisation and flexibility.

- Bluetooth wireless connectivity
- Individual or group scene control
- Controlled via smart device

Wide Network Solutions

A fully scalable solution using sensors and devices for real-time control – supports asset management and monitoring through connected CMS network.

- Internal or external node connectivity
- Central Management System (CMS)
- Intelligent lighting control

University of Glasgow

Case study

When the fourth-oldest university in the English speaking world needed to upgrade their campus lighting, it was DW Windsor they turned to.

Ageing heritage lanterns may look authentic and complementary to surrounding architecture, but often they no longer stack up to modern day performance requirements. With the lighting beginning to affect the students' campus experience, the University of Glasgow approached DW Windsor for a solution.

As the original manufacturer of the lanterns, DW Windsor was able to provide like-for-like Windsor Street replacements, which perfectly complemented the period architecture. The luminaires were pre-fitted with CMS nodes to provide additional lighting control benefits delivering savings of approximately 76%.

“The lighting has improved the visual comfort of the main campus, with campus users finding it easier to get around after dark, enhancing feelings of safety and security through quality lighting.”

— Electrical Engineer, University of Glasgow

Heritage columns & brackets

Columns and brackets play an important role in creating a desirable daytime lighting scheme, with column height and bracket projection being significant factors in establishing scale. At DW Windsor, we offer a broad selection of traditional lighting columns and wall brackets in various styles and sizes to suit a range of applications.

Columns

Our range of lighting columns vary in style and size to suit a broad range of applications and settings. Designed to perfectly complement our heritage luminaires, our columns feature period embellishments to enhance the appearance of

traditional lighting schemes. In addition, many of our traditional columns are available as raise and lower products, and our expert team can provide column designs to meet individual project requirements.

Please note: Column heights stated are measured to light source

Wall Box Bracket

Features a deep box design that can accommodate a wide range of electrical components to enhance the function of the luminaire while making installation and maintenance exceptionally easy.

Technical Details

- Column brackets are available with body diameters to suit all standard column shaft sizes
- We offer up to three standard projections of column and wall brackets and custom projections to order
- Pendant brackets are available with top entry to suit Easyfit, 1 1/4" or 1" BSP thread, depending on luminaire
- Wall Box Bracket can accommodate top and bottom cable entry with loop-in loop-out facility
- For the Wall Channel Bracket, cabling enters through a gland to the underside or via a rear cable-hole

Paint Finishes

- All columns and brackets are supplied galvanised and painted on site at our facilities in Hertfordshire
- We offer a standard paint finish, plus a premium paint system suitable for coastal and other harsh environments

Restoration & replica work

DW Windsor has a long history of helping to preserve original lanterns and columns. We take a hands-on approach to the work, which can mean deconstructing each piece of equipment, rebuilding, re-engineering and sensitively recreating it to ensure these icons of illumination are maintained for future generations.

Preserving charm and character

Maintaining the look and feel of heritage lighting is both an art and a science in remaining authentic, whilst complying with current lighting standards. We have perfected this balance over many years to become industry leaders in the craft of refurbishments and replicas.

Effective, respectful restoration involves all the traditional craftsmanship and skill that went into creating the original products. But ensuring a vintage luminaire meets modern performance and quality standards calls for a whole new skill set.

At DW Windsor, our craftsmen and women take the responsibility of preserving important parts of the nation's architectural legacy very seriously, ensuring every detail is as historically authentic as it is technically excellent.

Sustainable design principles

The ability to keep products in use for as long as possible is essential to building a circular economy. DW Windsor has long subscribed to a sustainable design philosophy, ensuring our luminaires are made to last and easy to maintain and upgrade.

Through the careful restoration of historic lanterns and columns, we're able to further support the circular economy by lengthening service life and reducing waste. In addition, by converting existing lanterns to LED technology, we're able to lower energy consumption and cut carbon emissions, helping our clients to reach their net zero targets.

Imperial College, London Refurbishment

The original Edwardian globe lanterns from Imperial College were badly in need of repair and restoration. Each lantern was carefully refurbished by hand. This included replacement glazing and the metalwork stripped and repainted. The globes were restored to their original richness and splendour, while retaining all of the detail of the original finish.

Battersea Bridge, London Replica

The lanterns on Battersea Bridge were severely damaged after years of use. To futureproof the luminaires, DW Windsor recreated the lanterns in copper with polycarbonate glazing. Special attention was given to replicating the intricate embellishments adorning the lanterns which were hand painted to match the original designs.

Tower Bridge

Case study

Over the years, functional replacements to the lighting at Tower Bridge in London had resulted in the loss of many original parts and unsympathetic refurbishment work.

Tasked with improving the lighting performance while also reducing energy consumption at this iconic location, DW Windsor provided a total refurbishment of the light fittings. The bridge had to remain open for the whole restoration period, so lanterns were removed in phases. Because of the harsh nature of the environment, the lanterns were repainted in marine-grade paint, further minimising disruption to the use of the bridge due to future maintenance.

The new scheme delivered improved uniformity across both carriageway and footpath, while minimising light spill into the river, ensuring safe passage of passing vessels.

"We chose DW Windsor because of their ability to control the light away from the river. The light output, distribution and overall uniformity of their refurbished lanterns was second to none."

— Electrical Engineer, City of London
